About Me

Computer Science student at Bina Nusantara University specializing in Database, with proven ability to build interactive dashboards in Power BI and Tableau, model data into star schemas, and automate ETL pipelines. Strong in SQL and Python for data cleaning and analysis, and experienced in translating business questions into clear, decision-ready insights. Currently active in leading a 152-member education commission at HIMTI across 7 regional campuses.

Education

Bina Nusantara University Aug 2024 - Present
Bachelor's Degree of Computer Science, Database - 3.51/4.00

Projects

Amazon India Fashion Sales Analysis | *Python (pandas, SciPy, statsmodels)* | *Group Project* 2026

- Found that Merchant-fulfilled orders fail at 22.9% vs. 13.0% for Amazon-fulfilled, by cleaning 128,975 raw orders, defining failure from both order and courier status, and segmenting failure rates by channel and category.
- Showed that the raw ₹65 promotion lift in order value shrinks to ₹12 within the same category and channel, by running 5 hypothesis tests (ANOVA, Levene, Kruskal-Wallis, chi-square, Mann-Whitney U) on 106,011 shipped orders and judging results on effect size rather than p-values.

Automated Healthcare Analytics Pipeline | *Pentaho Data Integration, MySQL, Power BI* | *Group Project* 2026

- Built an automated ETL pipeline that blocked 21% of 55,500 records (11,841 rows) from reaching reporting and loads a MySQL star schema in ~5.5 minutes.
- Found that billing varies by only 2.5% across medical conditions (Obesity $25.9K vs Cancer $25.3K) and that average stay is flat at ~15.5 days, by building a Power BI dashboard with 4 KPIs and 4 charts across condition, age group, risk and time.

Retail Sales Intelligence Dashboard | *Tableau, Star Schema* | *Group Project* 2026

- Built an interactive Tableau dashboard on a star-schema model analyzing 1,000 transactions and $323K in sales across 3 branches and 6 product lines, with dynamic metric switching, branch-split trends, and cross-view filtering.
- Identified Naypyitaw as the top branch ($110.6K) with the fewest transactions (328), meaning the highest spend per visit, and traced the mid-February 32% sales drop to a system-wide slowdown across all six product lines rather than a single category

Skills

Data Analysis: EDA, data cleaning & validation, descriptive statistics, dashboard design
Data Tools: SQL (MySQL, PostgreSQL), Python (pandas), R, Power BI, Tableau, Pentaho, Excel
Design: Figma
Languages: Bahasa Indonesia (Native), English (Professional working proficiency)

Organisational Experience

General Manager of Education Feb 2026 - Present

Board Member of Himpunan Mahasiswa Teknik Informatika (HIMTI) 2026/2027

- Led an Education Commission of 152 activists across 7 regional campuses (Kemanggisan, Alam Sutera, Bekasi, Bandung, Semarang, Malang, and Medan).
- Supervised and managed the Academic Event division, overseeing the end-to-end execution of seminars, company visits, workshops, community outreach (PKM), and webinars.
- Supervised and managed the Responsi division, directing BINUS School of Computer Science student learning initiatives (responsi, study clubs, and summaries) to enhance academic performance.

Secretary, HIMTI Company Visit 2025 Nov 2025 - Jan 2026

Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Secured a partnership with CIMB Niaga as the official host company for the HIMTI Company Visit 2025
- Managed all event administration and documentation, and drove theme ideation and cross-divisional coordination to deliver the full program

Chairman, HIMTI Workshop 2025 with NVIDIA: "Building Conversational AI Applications" Jun 2025 - Aug 2025

Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Led a 10-person committee to plan and deliver an end-to-end Conversational AI workshop for 30 participants, covering logistics, coordination, and event execution
- Designed the workshop theme and structure around current tech industry demands, and brought in an NVIDIA-certified instructor to deliver the technical training
