Summary

Computer Science student at Bina Nusantara University specializing in Database, with proven ability to build interactive dashboards in Power BI and Tableau, model data into star schemas, and automate ETL pipelines. Strong in SQL and Python for data cleaning and analysis, and experienced in translating business questions into clear, decision-ready insights. Currently active in leading a 152-member education commission at HIMTI across 7 regional campuses.

Education

Bina Nusantara University

Aug 2024 - Present

Bachelor's Degree of Computer Science, Database - 3.51/4.00

Projects

Automated Healthcare Analytics Pipeline | *Pentaho Data Integration, MySQL, Power BI*

2026

- Built an automated ETL pipeline (Pentaho, MySQL, Power BI) to transform 55.500 healthcare records into a star-schema data warehouse and interactive dashboard, enforcing multi-layer validation that filtered out 21% of invalid data.
- Orchestrated a 3-stage Pentaho job with error logging, ensuring seamless and fully automated data refreshes in approximately ~6 minutes.

Retail Sales Intelligence Dashboard | *Tableau, Star Schema*

2026

- Built an interactive Tableau dashboard on a star-schema model analyzing 1,000 transactions and \$323K in sales across 3 branches and 6 product lines, with dynamic metric switching, branch-split trends, and cross-view filtering.
- Identified Naypyitaw as the top branch (\$110.6K) with the fewest transactions (328), meaning the highest spend per visit, and traced the mid-February 32% sales drop to a system-wide slowdown across all six product lines rather than a single category

Chillo: Smart Fridge & Food Waste Tracker | *Next.js, TypeScript, MongoDB, Tailwind CSS*

2026

- Built and deployed a full-stack web app with Next.js (App Router), TypeScript, and MongoDB that tracks food expiry dates, sends automatic expiry alerts, and logs spoiled items to cut household food waste
- Developed a waste analytics dashboard (Recharts) with a Kitchen Score, financial loss estimates in IDR, and CSV export, backed by a REST API, session-based authentication, and Jest unit and integration tests

Skills

Programming Languages: Python, Java, C, TypeScript, SQL

Data Engineering: Pentaho Data Integration, Cloudera, MySQL, MongoDB, PostgreSQL

Data Visualization: Power BI, Tableau

Web Development: Next.js, Tailwind CSS, REST API

Design: Figma

Languages: Bahasa Indonesia (Native), English (Professional working proficiency)

Organisational Experience

General Manager of Education

Feb 2026 - Present

Board Member of Himpunan Mahasiswa Teknik Informatika (HIMTI) 2026/2027

- Led an Education Commission of 152 activists across 7 regional campuses (Kemanggisan, Alam Sutera, Bekasi, Bandung, Semarang, Malang, and Medan).
- Supervised and managed the Academic Event division, overseeing the end-to-end execution of seminars, company visits, workshops, community outreach (PKM), and webinars.
- Supervised and managed the Responsi division, directing BINUS School of Computer Science student learning initiatives (responsi, study clubs, and summaries) to enhance academic performance.

Secretary, HIMTI Company Visit 2025

Nov 2025 - Jan 2026

Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Secured a partnership with CIMB Niaga as the official host company for the HIMTI Company Visit 2025
- Managed all event administration and documentation, and drove theme ideation and cross-divisional coordination to deliver the full program

Chairman, HIMTI Workshop 2025 with NVIDIA: "Building Conversational AI Applications"

Jun 2025 - Aug 2025

Himpunan Mahasiswa Teknik Informatika (HIMTI)

- Led a 10-person committee to plan and deliver an end-to-end Conversational AI workshop for 30 participants, covering logistics, coordination, and event execution
- Designed the workshop theme and structure around current tech industry demands, and brought in an NVIDIA-certified instructor to deliver the technical training
